Celebrating 25 Year

Tap into 25 Years of Leadership

I TradeNetwork is at the forefront of connected commerce in the food and beverage industry. For over 25 years, we've connected buyers and suppliers across the entire food service supply chain.

Our proven track record in innovation, efficiency, and reliability sets us apart, enabling our clients to achieve seamless operations and significant cost savings.

Our goal is clear — connect and automate our customers' workflows, lower their costs, uncover revenue opportunities, and enable transparent, sustainable supply chains that empower stakeholders at every juncture."

— Amer Akhtar
President & CEO for iTradeNetwork

Building the Most Resilient Supply Chains

Our extensive network streamlines collaboration between buyers and suppliers, simplifying supply chain operations across retail, grower-shippers, carriers, manufacturers, distributors, and operators.

Harness the Power of the Network

iTradeNetwork powers North America's largest food and beverage trading network, connecting over 4,000 partners with millions of interactions.

Achieve Seamless Compliance

Simplify Traceability & Stay Ahead of Compliance

In today's fast-paced food industry, ensuring compliance with stringent regulations like FSMA 204 is critical for maintaining trust and securing your supply chain. iTradeNetwork's comprehensive solution takes the complexity out of managing traceability, empowering you with real-time insights and seamless compliance reporting.

Whether it's capturing key data points, labeling accurately, or validating your products against the Food Traceability List (FTL), our platform ensures you're always one step ahead. Discover how our innovative technology transforms challenges into opportunities for growth and customer confidence.

Invoice Status			Supply Chain Metrics	
PO#	STATUS	AMOUNT	TOTAL FREIGHT COST	
34536	Processing	\$14,221.09	\$5,200.00	
43233432	Paid	\$4,334.01		
34234	Acknowledged	\$10,345.10	TOTAL MILES 2,916.84	138
4234566	Paid	\$38,000.00		32% vs. last month
2232221	Invoiced	\$989,000.00		

12 Year Head Start on Developing Traceability Solutions →

Leading the Charge in FSMA 204 Compliance

When the industry talks about traceability, iTradeNetwork has been at the table from the start. We are a Partner that grows with you” As the regulatory landscape evolves, so do our solutions.

- GS1 Standards Board Group Members
- Collaboration with the FDA for platform compliance requirements
- Chair Member with the Produce Traceability Initiative (PTI) covering FSMA 204 Standards

“We felt confident in the iTraceFresh solution being able to meet the final draft of FSMA 204 and that the iTradeNetwork team would be there to support on-boarding suppliers best if we worked further ahead of the implementation date.

— Mike Ferguson
President of Fresh, Topco

One Solution to Meet FSMA 204 Requirements

Data Capture and Management	Data Accuracy	Data Validation & Reporting
Compliant FSMA 204 ASN from FTL items	Labeling capabilities to enable supplier compliance	Reporting on KDEs
iTrade compiles, validates, and transmits the traceability data, so the buyer receives the palletized ASN with the data at the time of shipment.	We support labeling for products to ensure that they have the proper, compliant PTI labels and SSCC Pallet Labels At Receiving: Scan just the Pallet label and receive all items on that pallet with its traceability data.	As the data is collected and validated, it is made available directly within iTradeNetwork’s OMS so you can maintain clear records of the food’s origin and its journey.

traceability

Best in Class Capabilities for FSMA 204 Compliance

iTraceFresh

A comprehensive traceability data capture, reporting, and labeling solution.

The only platform capturing KDEs natively across critical tracking events with the flexibility to fit any supply chain.

All within one solution, Suppliers can capture and send the basic requirements of an ASN directly from OMS, iTradeNetwork's procurement application. No momentum lost, and fast implementation.

Seamless integration with iTradeNetwork purchase order data, enables an easy, automated way to link traceability data directly to a PO.

More accurately and easily communicate sophisticated product traceability information, including lot, harvest date, expiration information, and more.

Data Validation & Reporting

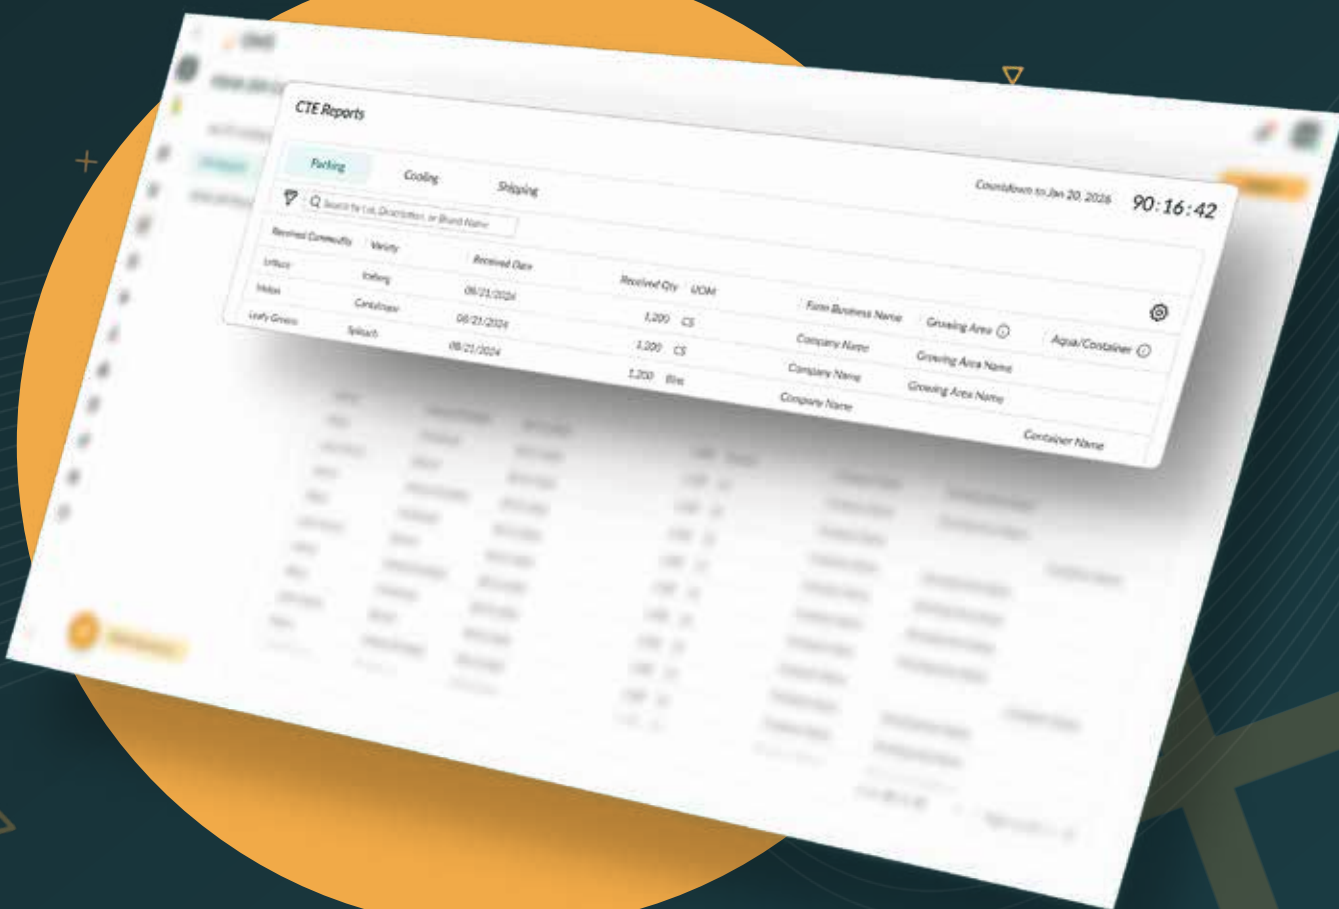

FSMA 204 Reporting

Contains all required KDEs today plus extensible to support future regulation changes

Beyond Basic FSMA 204 Data Elements Reporting

The market's most comprehensive traceability reporting goes beyond basic FSMA 204 data elements, with map-based views, advanced visualizations, and robust search features.

- ▶ Enhanced supplier scorecarding with FSMA 204 readiness and product freshness
- ▶ Improved forecasting accuracy for strategic demand planning and inventory management decisions
- ▶ Optimized waste reduction strategies and enhanced DC fulfillment operations
- ▶ Improved inventory flow and efficiency in receiving/slotting at DCs

Data Capture and Management

iTraceFresh FSMA 204 ASN

Inbound or Outbound Connection (EDI Connection) to send or receive trace data. Seamless integration with iTradeNetwork OMS purchase order data, giving an easy, automated way to link traceability data directly to a PO.

iTraceFresh Mobile ASN

Ensure case and pallet label data accurately matches the data sent to trading partners with features such as: transfers via reports, QR Codes, Smart URL Links, or EDI856 Advance Ship Notices [ASNs].

Capture and Send Key Data Elements (KDEs)

iTradeNetwork's iTraceFresh enables easy identification, data capture, and sharing of cases, pallets, and loads from harvest through final delivery. More accurately and easily communicate sophisticated product traceability information, including lot, harvest date, expiration information, and more.

Suppliers can leverage the solution to be fully compliant with any buyers' requirements, as well as support regulatory compliance with FSMA 204.

Data can be shared with reports, encoded onto PTI case labels, GS1-128 pallet labels, or sent electronically, including support for sending PTI/FSMA 204 - Advance Shipment Notices (ASNs).

Seamless integration with iTradeNetwork purchase order data enables an easy, automated way to link traceability data directly to a PO.

Ensuring Accurate Data Transfer:

Accurately transfer pallet and case label data via Advanced Shipping Notice (ASN / EDI transaction set 856).

Facilitating Information Sharing:

Share key details such as harvest and grow dates, shipping, and packing specifics electronically and at scale with all stakeholders.

Providing Easy Access to Robust Reporting:

Maintain clear records of the food's origin, journey through processing, shipping, and final destination.

Delivering Clean Data:

Eliminate incomplete data caused by fragmentation across various systems, ensuring a complete picture.

+400

Compliant Suppliers who are actively sending traceability data and Key Data Elements (KDEs) through iTradeNetwork.

traceability

Compliant PTI labels and SSCC Pallet Labels →

Go Beyond the Basics of FSMA 204 Requirements with Advanced KDE Capture

iTraceFresh Case Labeling

Seamlessly share essential data elements throughout the supply chain using iTraceFresh Case Label, a comprehensive solution for compliant PTI labels. This system empowers you to track and transmit crucial information, enhancing transparency, collaboration, and precision across the entire supply chain network.

With complete supply chain transparency, you deliver much more than just compliance. Not only will you meet buyer and regulatory mandates that protect you and your trading partners from food safety events, but you will also establish your business as a preferred, trusted partner by providing insights that will maximize freshness and shelf life.

iTraceFresh QR Code Labeling

Traceability via QR labeling at the case level (wholesale pack) and item level (consumer pack), enabling granular recall alerts.

iTraceFresh-QR Labeling is the only traceability solution for individual products or packages that links the first and last mile of the supply chain, boosting shopper confidence by providing greater transparency and accuracy in tracking fresh food, and allowing shoppers to reward brands with loyalty and preference.

Consumer Connections Via QR Code

Dynamically link content to each individual product, providing detailed information such as recall alerts, grower stories, recipes and brand information, while enabling customer feedback.

No-code Dashboards

Create and manage dynamic content using our no-code solution to build out memorable brand experiences.

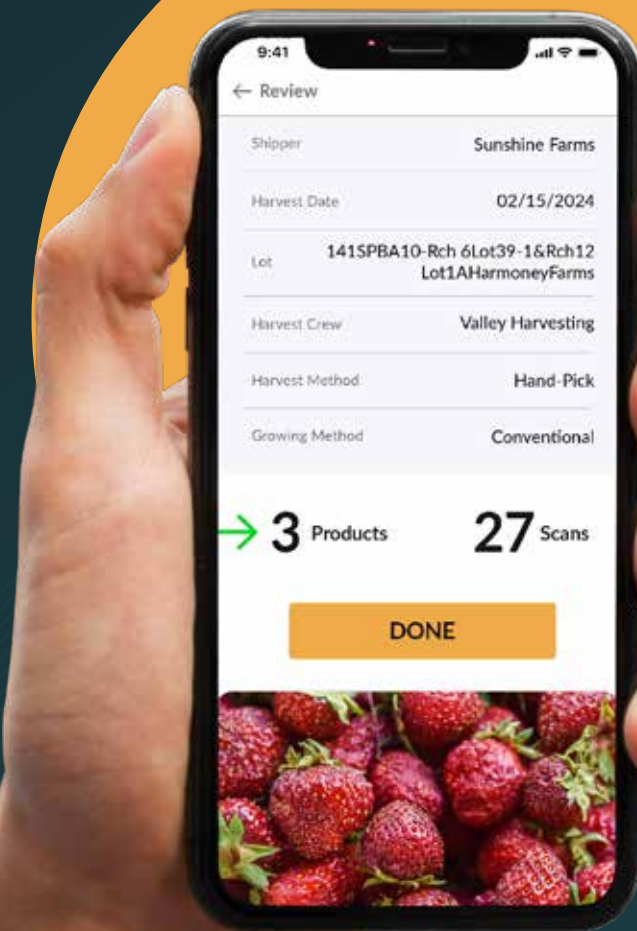

Labeling Made Easy

Remain cost-effective, flexible with minimal IT resources. Item seamlessly integrates into even the most challenging workflows, including field packing and pre-printing labels.

Item Recall Alerts

Food safety messaging can be added to trace code blocks for configurable alert messaging when codes are scanned.

Meet SFCA Regulations →

Streamline Compliance with the Safe Food for Canadians Act (SFCA)

iTradeNetwork’s SFCA Module helps participants in the perishables supply chain easily and seamlessly comply with the SFCA regulations. According to the Canadian Food Inspection Agency (CFIA), the SFCA focuses on three important areas:

1

Improved food safety oversight to better protect consumers

2

Streamlined and strengthened legislative authorities

3

Enhanced international market opportunities for Canadian industry

Point of Origin Visibility

The SFCA Module safeguards the Canadian food supply chain by ensuring that products are shipped only from authorized ship-from locations, such as warehouses and packhouses, where adequate documentation and safety protocols are in place.

One Step Forward, One Step Back

The iTracefresh traceability suite further increases compliance by quickly capturing and keeping traceability records in accordance with one step forward and one step back provisions in sections 90 through 92 of the Safe Food for Canadians regulations.

Become Your Retailers Preferred Partner

Collect dozens of data attributes about provenance, variety, and growing conditions of all kinds of perishables, and seamlessly transmit this information downstream to buyers so they have a full picture of what they are receiving and know exactly when it was shipped.

iTradeNetwork’s SFCA Module is designed to tackle these concerns by specifically strengthening traceability functionality within the iTradeNetwork platform and improving import controls.

Bioengineering Module →

Bioengineered Food Disclosure Standard

Beginning January 1, 2022, food manufacturers, importers, and food retailers were required by law to disclose any bioengineered ingredients as part of the National Bioengineered Food Disclosure Standard (NBFDs).

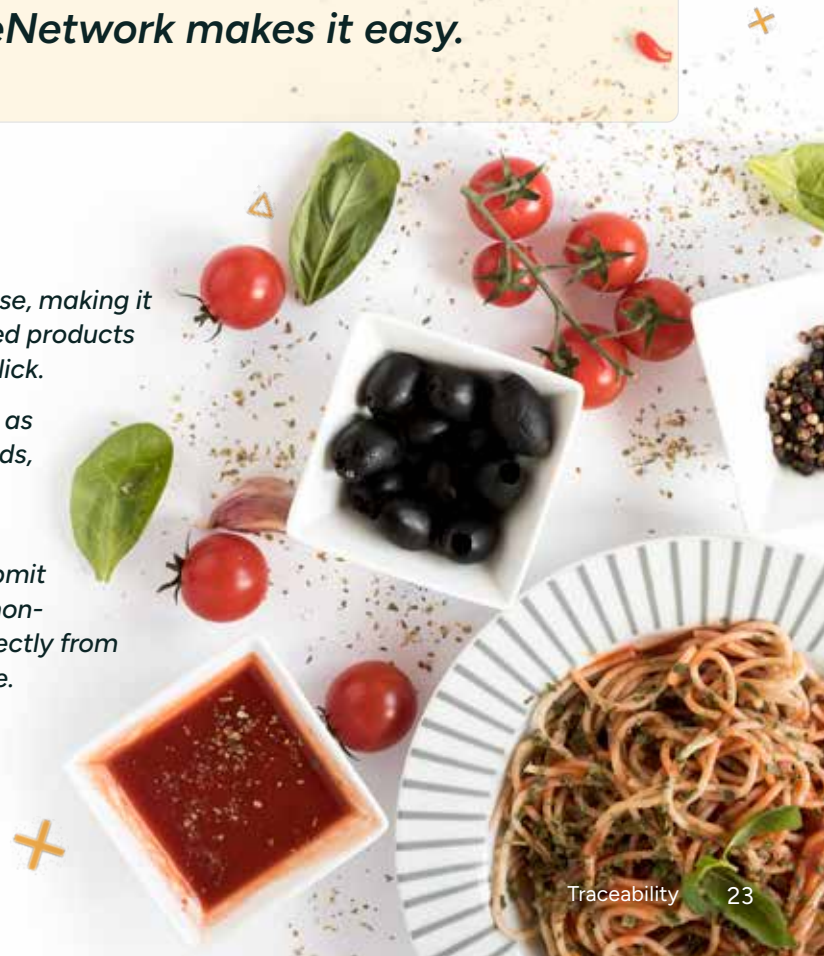

iTradeNetwork’s Bioengineering Module allows vendors to update their catalog to include the bioengineering status of each PO line item, or manually upload bioengineering records on shipping notifications to their buyers. If the status of any items are not disclosed, a rejection notification is sent to the supplier so they can make the necessary changes and ensure compliance.

Why Choose iTradeNetwork?

A lot goes into ensuring bioengineered food products are properly disclosed: invoices, inventory records, catalog data, and much more. iTradeNetwork makes it easy.

The Bioengineering Module

- ▶ Identifies bioengineered foods prior to purchase, making it easy for suppliers to update new bioengineered products through catalog or PO updates with a single click.
- ▶ Simplifies record keeping for documents such as Invoices, bills of lading, country of origin records, process verifications, etc.
- ▶ Integrates with iTradeNetwork’s Transit Palletized ASN application so vendors can submit bioengineered food data with a palletized or non-palletized Advance Shipping Notice (ASN) directly from the field or pack shed, all from a mobile device.

quality inspection

Quality Inspection & Analytic Solution

iTradeFresh

Enhance food quality with iTradeNetwork’s inspection and analytics solution, ensuring consistency through real-time data and informed decisions. By leveraging iTradeNetwork’s innovative technology, you’re not only safeguarding the quality of your food but fostering consumer trust, reinforcing your commitment to delivering a quality product.

More than 80% of shoppers agree that quality of fresh produce is the single most important factor when choosing a grocery store (FMI). And with perishables comprising over half of total grocery spending, offering consistently fresh produce not only protects your brand, but also drives sales and customer retention.

iTradeNetwork’s food quality inspection software, iTradeFresh, ensures consistent produce quality by standardizing and guiding inspection processes, automating notifications, providing clear issue and vendor insights, and helping buyers source and procure the best product available on the market.

Fresh Made Easy

With standardized perishables inspection practices, you will uncover countless insights.

- ▶ Valuable resource for grower scorecarding
- ▶ Standardize product inspection operations across regions, coolers, inspectors, etc.
- ▶ Communicate quickly with growers about rejections
- ▶ Communicate any spec ‘flexes’ across your QA organization with a single click
- ▶ IoT integration with the top 3 temp-track companies provides GPS/temperature alerts

Standardize Inspections Across Your Organization

Standardize and automate your inspections across different facilities and inspectors. The app guides inspection processes, using your own criteria.

Quickly Act on Insights

With real-time analytics, alerts and notifications on product rejections, you can make informed business decisions quickly.

Conduct Inbound and Field Inspections

Automatically sync PO data to inspect inbound product, and even send dispatches to inspect product you’ve ordered, before it has left the field.

Procure the Best Product on the Market

Compare receiving warehouses and rank vendors based on nearly a dozen distinct metrics with iTradeFresh analytics.

“Our members now see the difference in the quality they receive on a day-in and day-out basis.”

Reade Sievert
VP Corporate Produce,
Associated Wholesale Grocers
